## Air Compressors and Air Sources NFPA Compliant Systems

### Simple Air Compressor

A cost effective, low profile Breathing Air System that is a complete compressor assembly with maximum open frame air flow design. Features our patented FreshAir® Purification System capable of up to 37,000 scf. (NFPA Compliant System)

### Hush Air Compressor

The quietest Breathing Air System on the market today. A complete compressor assembly with maximum open frame air flow design. Featuring our patented FreshAir® Purification System capable of up to 84,000 scf.

### Patriot Series

The Patriot is the signature series of Breathing Apparatus Cylinder Charging Stations (BACCS) from Scott Breathing Air Systems. An innovative platform design, the Patriot System allows a user to custom configure a unique Patriot to meet specific requirements for space and performance. The Patriot System can be engineered as a single assembly system or can be accompanied by up to four subassemblies. Modules may be selected in any combination to meet your specific situation. The modular concept allows you to build a system over time or to add to an existing breathing air system to meet ever changing needs.

## Air Compressors and Air Sources NFPA Compliant Systems

### Liberty-I

The easy-tow Liberty-I is a totally enclosed single axle trailer that is well suited for mobile applications. It comes with two ASME storage cylinders and is capable of being towed by any vehicle rated for 6000 lbs or more.

### Liberty-II

The easy-tow Liberty-II has all of the features of the Liberty I but is a tandem axle unit. The Liberty-II can bear more weight, thus leading to an array of available options. It also comes with four ASME cylinders instead two and is capable of being towed by any vehicle rated for 7000 lbs or more.

## Air Compressors and Air Sources General Purpose Systems

### Easy Air Gas

The perfect economical and portable air solution for a multitude of applications. Electric or gas powered, these lightweight, low profile, 4300psi compressors are ideal for industrial, SCUBA and paintball applications.

## Air Bottle Fill Stations

### Guardian Fill Station (Conventional)

This economical unit is a complete, total containment BAC charge module, designed with many unique safety features. It has rigid charge adapters, safety interlocks, safety pressure gauges, charge and bleeder valves and a pressure regulator for automatic BAC charging.

### RevolveAir® Fill Station (State-of-the-Art)

The revolutionary RevolveAir charge module provides maximum safety and performance, simultaneously charging (2) BAC's within the projective chamber while two BAC's are being exchanged on the outside of the chamber. The unit comes complete with safety interlocks, safety gauges, charge and bleed valves and pressure regular for automatic BAC charging.

## Storage and Cascade Systems

### Cascade Air Control Panel

Configured to client requirements. All cascade air control panels are fitted with storage check valves, storage pressure gauges, and storage outlet valves (Per bank).

## Storage and Cascade Systems

### Storage Systems

Scott Breathing Air Systems provide an array of cylinder combinations to suit your department's particular requirements for space and performance.

#### Vertical Storage

Vertical storage units are designed as either free standing modules or can be integrated into either the Guardian or RevolveAir® charge stations. Vertical storage units are available with two, four or six ASME or DOT cylinders. Standard configuration is plumbed as one volume; cascade plumbing and controls are also available.

#### Horizontal Storage

Horizontal storage units are designed as free standing modules. Cylinders are positioned horizontally, utilizing two, four or six ASME cylinders. Standard configuration is plumbed as one volume. Cascade plumbing and controls are available. All ASME cylinders are dual coded for working pressures of 5200psi and 7000psi.
